5. ADJUSTMENTS

5-1. Adjustment of the Auto Return

- 1) The adjusting screw in top view is one to adjust the position of Auto Return when stylus reaches lead-out groove.
- 2) Make adjustment of the screw in such a way that stylus lifts up automatically around the middle way of lead-out groove. Namely turn the adjusting screw clockwise is for leading and counterclockwise if for lagging.
- 3) After adjusting the screw properly, check its operation a few times.

5-2. Adjustment of the Clearance between PU plate and Micro Switch

After replacing the micro switch, adjust the clearance between PU plate and micro switch (See Fig. 5-1) to be approximately 0.3 mm at the tonearm on the arm rest by the clearance adjusting cam.

5-3. Adjustment of the main gear

When the main gear makes abnormal mechanical noise caused by touching to the pinion gear during playing record disc, adjust its position with cam 2 to make even clearance between the circular arc portion of the main gear and the pinion gear.
